EDUCATION

University of British Columbia

Bachelor of Science in Computer Science *Sep 2023 - Present*

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, C#, SQL, C, HTML/CSS, JavaScript

Libraries and Tools: Git/GitHub, CI/CD (GitHub Actions), Microsoft Azure, Docker, JUnit/PyTest, REST APIs

Certifications: Microsoft Certified: Azure Fundamentals

TECHNICAL WORK EXPERIENCE

RF Software Developer Co-op

Netgear, Richmond, Canada *Aug 2025 – Present*

- Engineered Python backend services to automate complex hardware validation workflows, reducing manual testing time by 40% and increasing deployment velocity.
- Reduced system downtime by 75% by writing comprehensive unit and integration tests, ensuring 100% code coverage for critical automation modules.
- Built data ingestion pipelines (ETL) to transform raw log data into structured formats (JSON/SQL), enabling the engineering team to visualize real-time performance metrics.
- Optimized legacy codebase, refactoring scripts for modularity and maintainability, which significantly reduced technical debt for the automation suite.

Software Engineering Intern

Microsoft, Shanghai, China *May 2024 – Sep 2024*

- Architected and deployed a scalable full-stack web application on Azure, integrating RESTful APIs with a high-performance C++ backend to process large-scale user requests.
- Contributed to client presentations, including the design and layout of VOC reports using Figma, improving project communication and client satisfaction known through direct feedback.
- Managed CI/CD pipelines via GitHub to automate testing and deployment, ensuring rapid iteration and high availability for mission-critical features
- Developed practical expertise in implementing large-scale models, while using advanced prompt engineering techniques to optimize performance outcomes on our proprietary platform.

TECHNICAL PROJECTS

- **Volvo Sales Dashboard Design** *May 2024 – Sep 2024*
  Used Figma app to design and develop working dashboard for the Microsoft Delivery team, used as template for front-end programmers, and will be used by the Volvo China sales team. Figma Design
- **Prompt Engineering Platform |** *AI Integration, Product Design* *May 2024 – Sep 2024*
  Applied prompt engineering in real-world projects, including summarizing customer feedback and extracting key insights. This platform tailored AI prompts to meet client needs and improve the functionality of AI-driven products.
- **Microsoft GPT Hackathon |** *System Design, Business Logic* *Jun 2023 – Aug 2023*
  Contributed to strategic project planning for a car sales system designed to convert leads into opportunities by tracking and following up with potential clients. The system enables sales teams to perform in-depth client analysis prior to outreach, thereby optimizing engagement and conversion strategies.
- **Tower Defense Game |** *Java, OOP, SQL* *Jan 2024 – Apr 2024*
  Designed and developed a strategy-based game using Java, applying Object-Oriented Programming principles to architecture distinct classes for towers, enemies, and game states. Implemented a data persistence layer using SQL, allowing users to save game states and track high-score metrics across sessions.
